

Turf Type Tall Fescue

3RD millennium SRP

Spreading rhizomes strengthen sod, help establish new turf, and repair damaged areas

3RD Millennium SRP™

is one of TMI's entirely new and advanced generation of tall fescues. The presence of rhizomes creates a *self-repair potential* for this species which can speed establishment, improve traffic tolerance, plus aid and increase recovery potential from damage.

With its dark color and fine leaf texture, 3rd Millennium SRP mixes well with five-to-10 percent Kentucky or Texas bluegrass.

3rd Millennium SRP resists Brown Patch which can be devastating to tall fescue turf.

3rd Millennium SRP has an expanded adaptation range, improved color and texture, plus, with tall fescue's inherent drought, shade and wear tolerance, make it the new choice for sod production, home lawns, parks and athletic fields.
