Turf Blue HGT® features the very best of Barenbrug's Kentucky bluegrass varieties. Starring 35% Barvette HGT, Turf Blue HGT has outstanding bluegrass performance in the most difficult of climate adaptations, the transition zone. Due to Barvette HGT's smaller seed size, 35% blend composition acts more like 50%. Combining Barvette HGT's seed count with its extremely aggressive nature, users notice the power of this blend even before establishment. Quick to germinate with fast establishment, Turf Blue HGT provides early spring green-up, strong summer performance, and is ideal for use in all areas of Kentucky bluegrass adaptation, even in the hottest regions of the transition zone.

Considering fairway renovation? Turf Blue HGT is a break through blend affording 'true renovation' and turf improvement without the need for glyphosate applications. Developed with inherent traffic tolerance and strong wear recovery, Barenbrug's Turf Blue HGT offers the golf course superintendent or sports field groundskeeper outstanding bluegrass turf performance and exceptional resilience to stress, insects, traffic, and the challenges of the game. It turns out that the nature of Turf Blue HGT also serves a purpose in the warm-season overseed market. Through its development, the Blumuda concept of overseeding Kentucky bluegrasses into bermudagrass found Turf Blue HGT to be one of the best matches for cohabitation.

Barvette HGT continues to surprise even those who helped create it and is gaining notoriety as one of the most unique Kentucky bluegrasses. Below you will find a recap of the benefits of Turf Blue HGT, which can be used to bring a bit of uniqueness to your own golf course, sports field, or other turfgrass area.

- Rapid germination (10 days) and establishment
- Very early spring green-up
- Excellent summer density and performance
- Exceptionally strong resistance to Summer Patch
- Very tolerant of bluegrass billbugs and white grubs
- Extremely traffic tolerant with rapid recovery from use
- An unorthodox combination of extremely aggressive nature with very little thatch production
- Tolerant of fairway cutting heights of 0.5"

Turf Blue HGT is available in each of the following alternative forms:

- TB HGT w/ Yellow Jacket
- HGT Sod
- TB HGT w/ RPR
- TB HGT w/ RPR w/ Yellow Jacket
