Sudden Impact is an elite Kentucky bluegrass in the Jacklin line-up and provides exceptionally high quality turf at fairway mowing heights of 0.5 in. (1.3 cm) to homeowner mowing heights of 3 in. (7.6 cm).

Elite Turf Performance: Widely adapted to full sun and light shade with coast to coast adaptation, Sudden Impact makes a pleasing “impact” with its very dark green color and beautiful turf texture. Sudden Impact is an ideal choice by itself or as a component for blending with other elite Jacklin bluegrasses or mixing with top performing Jacklin perennial ryegrasses, fine fescues, and turf-type tall fescue.

Fairway Tough: With very strong establishment traits, Sudden Impact’s excellent NTEP performance for density, traffic tolerance, and tolerance to fairway mowing heights shows great playability without having to sacrifice turf quality.

Superior Turf Density: Exceptional year ‘round density and strong summer persistence gives Sudden Impact natural resistance to the establishment of weeds.

Improved Spring Performance: Exhibiting good spring green-up and very little seedhead development, Sudden Impact will make a big difference in the spring quality of your bluegrass turf when used for homes, sports fields, sod production or golf courses.

Disease Resistance: NTEP data indicates very good overall disease resistance for Sudden Impact. It exhibited resistance to summer patch and stem rust, with improved resistance to dollar spot and leaf spot.

Seeding Rate: 2-3 lbs./1000 ft² (10-15 g/m²) by itself or blended with other bluegrasses. Mix Sudden Impact with 20% ryegrass or 80% tall fescue.
