TALL FESCUE

## TITANIUM 2LS

TALL FESCUE

### SETTING THE BAR FOR TALL FESCUES

- AGGRESSIVE LATERAL SPREAD
- VERY DARK GREEN
- EXCELLENT SOD STRENGTH
- SHADE TOLERANT
- ENDURES LOWER FERTILITY SOIL
- SUPERIOR TURF DENSITY

**Titanium 2LS** is setting the bar high for the next generation of tall fescue cultivars. **Titanium 2LS** exemplifies the perfect high-quality turfgrass; it's dark green, very dense and has excellent wear tolerance. **Titanium 2LS** is an excellent choice for sod farms and other applications where only the best variety will do. In addition **Titanium 2LS** is very drought tolerant, keeping its great looking appearance late into the summer even under less-than-ideal conditions. **Titanium 2LS** is also able to grow successfully in soil that has low fertility. And with all MVS varieties that carry the *Lateral Spread* brand, Titanium 2LS has aggressive lateral spread ability.

**NTEP DATA**

VARIETY	TURF QUALITY MEAN	LEAF TEXTURE MEAN	SPRING DENSITY MEAN	GENETIC COLOR MEAN	TQ UNDER SHADE MEAN (IL)
<b>TITANIUM 2LS</b>	<b>6.5</b>	<b>6.4</b>	<b>6.5</b>	<b>6.8</b>	<b>6.9</b>
RHAMBLER 2 SRP	6.4	6.2	6.3	6.4	6.6

2012 NTEP TALL FESCUE DATA - 2013 PROGRESS REPORT DATA. TURFGRASS QUALITY AND OTHER RATINGS 1-9; 9=BEST

**GROUND COVER - SUMMER**

Titanium 2 LS has excellent drought tolerance which means more living ground cover all summer long.

2013 NTEP Mean Percent Living Ground Cover (Summer)

**BROWN PATCH RESISTANCE**

Titanium 2LS has excellent disease resistance including a high NTEP ranking against Brown Patch.

2013 NTEP Mean Brown Patch Ratings

**FALL COLOR - OCTOBER**

Titanium 2LS maintains its dark green color into the fall months and beyond.

2013 NTEP Mean Fall Color (October)

**SEEDING AND OVERSEEDING** Tall fescue prefers warmer soil for germination, typically 55°F to 58°F. In the Transition zone this means early spring and early fall. Further north, late spring and late summer is preferred. Titanium 2LS should be sown at a rate of 6 to 9 lbs per 1000 sq ft (275 to 400 lbs per acre), lightly covered with soil and kept moist until after the first cutting. Maximum density is achieved by planting with a slicer/seeder or following aeration, and with the application of a starter fertilizer. First mowings are generally within three weeks, or when plants first reach 3 in. in height. Overseed existing tall fescue at a rate of 225 to 300 lbs per acre.

**MAINTENANCE** Titanium 2LS natural dark color, density and pest resistance minimize the need for extensive maintenance. Generally 2 to 3 pounds of nitrogen as part of a balanced fertilizer applied annually is all that's required. Cutting heights should range between 2 to 3 inches. Under controlled conditions heights down to 1 inch can be satisfactorily maintained.
