Dramatically Improve Your Field

TURF Enriching the Field

Topdressing to Prevent Slippery, Wet Conditions

Topdressing with Turface or Field & Fairway provides optimal conditions. These products are naturally wettable without excessive moisture. Topdressing with Turface or Field & Fairway also enhances the field’s drainage, ensuring that water runs off quickly and safely.

Reduce Watering Requirements

Turfway, Field & Fairway, and Greens Grade absorb about 90% of their weight in water. If you incorporate 10 tons of Field & Fairway into your field, you retain 2,000 gallons of water. This water is available to the plant, reducing irrigation requirements.

Eliminate Standing Water and Mud

Table and Field & Fairway absorb about 95% of their weight in water. Pouring these products into muddy, wet areas instantly absorbs the excess water and turns the muddy area into a dry, safe, playable surface.

Long-Term Benefits by Permanently Modifying the Soil

The proven stability of Turface and Field & Fairway permanently modifies the soil. These products add water and air-holding pore space. Using these products prevents compaction, alters better drainage and helps root establishment of automatic turf. Incorporating Turface or Field & Fairway into your field’s construction is a long-term investment in your field’s performance.

An Investment that Pays

Over the life of athletic fields constructed with Turface, there are substantial savings reported by groundskeepers, including:

- Accelerated growth
- Reduced water usage (up to 20%)
- Reduced fertilizer usage (up to 25%)
- Reduced chemical treatments for disease and algae

We can help you secure consultants or sports turf architects to review plans and write specifications, test and secure materials, prepare root-zone formulations worksheets and more. Contact your local Turface Athletics distributor or call 1-800-207-6457 to request a FREE project consultation.

Considering Construction?

A full renovation, heavy-traffic area renovation or new construction? Give Profile a call! Profile Products, at no cost to you, will enlist its team of professionals to guide you through your project, ensuring safe and reliable fields so your athletes can perform to the best of their abilities.

For more detailed information, visit www.turface.com.

How to Choose the Right Product

Considering Construction?

Each of our sports field products is specifically manufactured to work with a particular soil type. This gives you the greatest control over soil composition—no matter what soil was used in the construction of your field. It’s important to choose the right product and particle size for your specific application.

- Largest particle size
- Ideal for wetting or native soil
- For coarse root zones
- Can be used to seed

- Medium particle size
- Ideal for topdressing
- Can be used to seed
- Available in Emerald Greens grade

- Specifically sized for
- Sand-based root zones
- Increases moisture and nutrient retention of sand
- Emerald color is excellent for
divot mixes and worn areas
Our Products’ Proven Performance

Profile’s products are relied upon by groundskeepers and coaches to provide the safest, most playable surfaces for their athletes.

Why use Turface?
- Prevents slippery, wet conditions
- Eliminates standing water and mud
- Reduces irrigation needs
- Reduces divoting and damage to turf
- Reduces injury risk

Turface Athletics delivers:
- Instant results
- Long-term benefits
- The best field possible

Used by Professionals Everywhere

When you work with Turface Athletics, you are connected to the industry’s largest network of sports field knowledge—and to products that have been used on more sports fields than any other brand for over 40 years. Recent projects include Carolina Panthers’ Bank of America Stadium, New England Patriots’ Gillette Field, Washington Redskins’ FedEx Field, Chicago Bears’ Soldier Field, Olivet Nazarene University, 2004 Olympic Fields and thousands of others.

Turface leads the industry with innovations such as Field & Fairway™ Emerald, the first soil conditioner combining Turface’s water absorption and compaction fighting properties with a rich green color that covers up rough spots on your field. Become part of Turface Athletics and dramatically improve your playing surface—guaranteed.

Give us a call at 800-207-6457 or visit our website at www.turface.com to put the Turface Athletics team to work for you.

Ken Mrock,
CHICAGO BEARS

"Turface Athletics provides a valuable and unique service offered to professionals like the Bears, as well as high schools and parks and rec. Bringing in professionals experienced in natural grass fields results in superior playing surfaces for our athletes.”

Turf in Stress Areas

Turf isn’t just an outstanding infield and conditioner—it is an essential tool in high-competition areas.

COACHES AND GROUNDSKEEPERS GUIDE TO SPORTS TURF PROBLEM SOLVING AND PREVENTION

For more detailed information, visit www.turface.com.
Worn fields will not recover properly with rest alone. They need help in bringing them back to a safe and playable surface. Just follow these six easy steps from Ken Mrock, Head Groundskeeper of the Chicago Bears.

**STEP 1:** Core aerify with multiple passes when conditions are proper to achieve maximum depth. Allow plugs to dry. Avoid aerification in high heat (80+ degrees F).

**STEP 2:** Apply Field & Fairway™ at a rate of 500 lbs. per 1,000 sq. ft. You can use a topdresser, drop or push spreader fully open to evenly apply product.

**STEP 3:** After topdressing, seeding is important to establish a denser stand of turf. Contact a local Turface/Profile distributor for the recommended seed blend needed for your area.

**STEP 4:** Slowly drag the entire turf area with a mat drag to force materials into the turf and aerification holes. Best results occur if plugs are allowed to dry.

**STEP 5:** Excess. Contact a local Turface/Profile distributor to test your soil to determine proper type and amount of fertilizer needed.

**STEP 6:** Water the entire field, but do not soak. Puddling may cause seeds to float, resulting in uneven growth.

Ken Mrock, Chicago Bears

Identify standing water on field. Pour on product and let it absorb the water and mud. Rake area. Apply additional product as needed.

Keep soccer goal or football extra point areas safe. Low and worn areas can puddle. With Turface/Profile, mud and water can be quickly absorbed, leaving a dry area. To permanently fix low spots: till area up incorporating product, firm to grade, seed or sod.

Results in a safe and playable surface.

TOPDRESS WORN AREAS TO PROTECT TURF AND IMPROVE PLAYING AREAS

Heavy play wears turf away and compacts soil so it can’t drain. Applied as a topdressing after aerification, Turface/Profile wicks water from saturated soils, leaving air pockets so turf can develop roots.

Use topdresser to spread product. Identify worn area and aerate. Drag field mat across.
Eliminate Standing Water and Mud

REDUCE WATERING REQUIREMENTS
Turface, Field & Fairway and Greens Grade absorb about 90% of their weight in water. If you incorporate 10 tons of Field & Fairway into your field, over 2,000 gallons of water will be retained during irrigations or rains. The stored water is available to the plant, reducing irrigation requirements.

ELIMINATE STANDING WATER AND MUD
Turface and Field & Fairway absorb about 90% of their weight in water. Pouring these products into muddy, wet areas will instantly absorb excess water and turn the muddy areas into a dry, safe, playable surface.

Dramatically Improve Your Field

TOPDRESSING TO PREVENT SLIPPERY, WET CONDITIONS
Use Turface or Field & Fairway as a topdressing prior to events when rains are forecast. This ensures maximum traction. Be sure to spread materials over entire KOI, swing, and bocce court surfaces before players. Topdressing with Turface or Field & Fairway absorbs initial rainfall and adds traction for added security. With pre-topdressing a field, you protect the safety of the plants—helping prevent turf damage.

PAY LONG-TERM BENEFITS BY PERMANENTLY MODIFYING THE SOIL
The porous nature of Turface and Field & Fairway permanently modifies soil. These products add water and air holding space, increasing the capacity of your field to handle intense traffic and extreme weather conditions.
