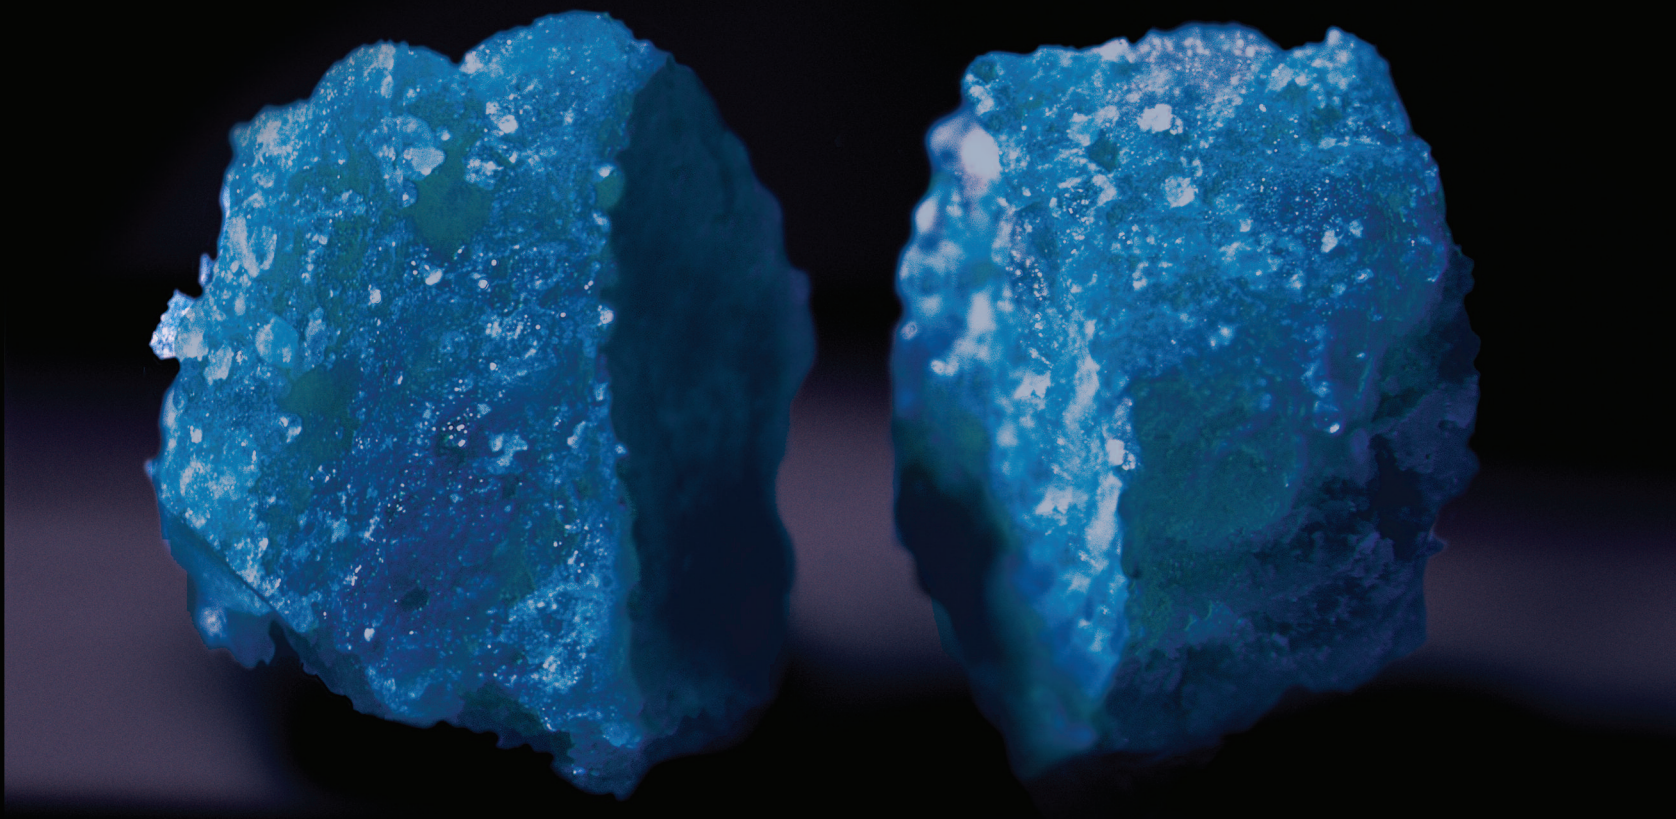
MESA®

Patented Controlled Release Nitrogen

Half a piece of MESA is still MESA



Look for MESA in the following LebanonTurf products:

ProScape 19-0-5 40% MESA with Green-Smart
ProScape 25-0-5 51% MESA 1% Fe
ProScape 20-0-5 30% MESA 1% Fe
ProScape 32-0-6 30% MESA

MESA®

Patented Controlled Release Nitrogen

How can something that works so fast.....last so long?

For years, sulfur coated urea (SCU) and similarproducts, have long been thought of as an effective way to control the release of fertilizer nutrients. Unfortunately, these coated-products have always contained shortcomings: losing their slow-release properties when cracked, the coating adding no agronomic value to the soil, and their inability to break down completely, leaving residual behind. Turf managers always had to accept these problems and deal with the consequences, until now.

LebanonTurf is proud to offer MESA, the first nitrogen source to combine ammonium sulfate with methylene urea in a single particle. MESA is a smarter alternative to coated-products. Here's why:

- The release of ammonium sulfate is effectively controlled to provide consistent, brilliant turf color
- No artificial coatings means no residual is left behind
- MESA is not subject to nutrient lock-off making it a more consistent, reliable product
- No 'flush-growth' response after application means less clippings and healthier turf

Iowa State University

Excellent color and reduced clipping yields....

TREATMENT	Clippings	Quality
Urea	14.8	7.7
Am Sulfate	15.8	7.5
MESA™	13.4	7.6
SCU	24.2	7.7
IBDU®	17.9	7.3
Nitroform®	8.2	6.1
Nutralene®	10.8	7.4
Scott's MU	3.2	7.7
Check	3.2	4.5

MESA consistently produced excellent turf quality. When compared to SCU and urea there was no significant difference in quality. Additionally, MESA produced 45% fewer clippings.

If you're looking to put the problems associated with SCU behind you, give MESA a try. It's quick response and excellent color makes it make it the safe, economical choice for any turf manager.
